### 8. who command

who command can list the names of users currently logged in, their terminal, the time they have been logged in, and the name of the host from which they have logged in.

**syntax :**

who [options] [file]

**example :** who command displays an informative listing of these users.

\$ who -Hu

NAME	LINE	TIME	IDLE	PID	COMMENT
root	console	Aug 1:07:51	0:48	11040	(:0)
sachin	pts/10	Aug 1:08:36	.	13678	(mercury.heavens.com)

This sample output at 08:36. The "." Indicates activity within the last minute.

- **\$ who am I**

who am I command prints the username.

### 9. uname command

uname command simply displays the name of the operating system.

**Syntax :**

\$ uname [options]
