GENERAL-PURPOSE UTILITIES:

1. cal command

cal command is used to display the calendar of any specific month or a complete year.

Syntax:

cal [options] [month] [year]

Example1: cal can be used without arguments, in which case it displays the calendar of current month.

$ cal

```
        March 2021

Su  mo  tu  we  th  fr  sa
         1   2   3   4   5   6
 7   8   9  10  11  12  13
14  15  16  17  18  19  20
21  22  23  23  25  26  27
28  29  30  31
```

Example2: cal command used with arguments.

$ cal 03 2021

```
    March 2021

Su   mo   tu   we   th   fr   sa
      1    2    3    4    5    6
 7    8    9   10   11   12   13
14   15   16   17   18   19   20
21   22   23   23   25   26   27
28  29  30  31
```
